Potential for combining statistical data and Earth Observation for risk management

Jakub Ryzenko, CIK CBK PAN

Crisis Information Centre SRC

THE RIGHT **INFORMATION** FOR THE RIGHT **PEOPLE** AT THE RIGHT **TIME**

Integration of data from different sources

Expert support in operational use of geoinformation

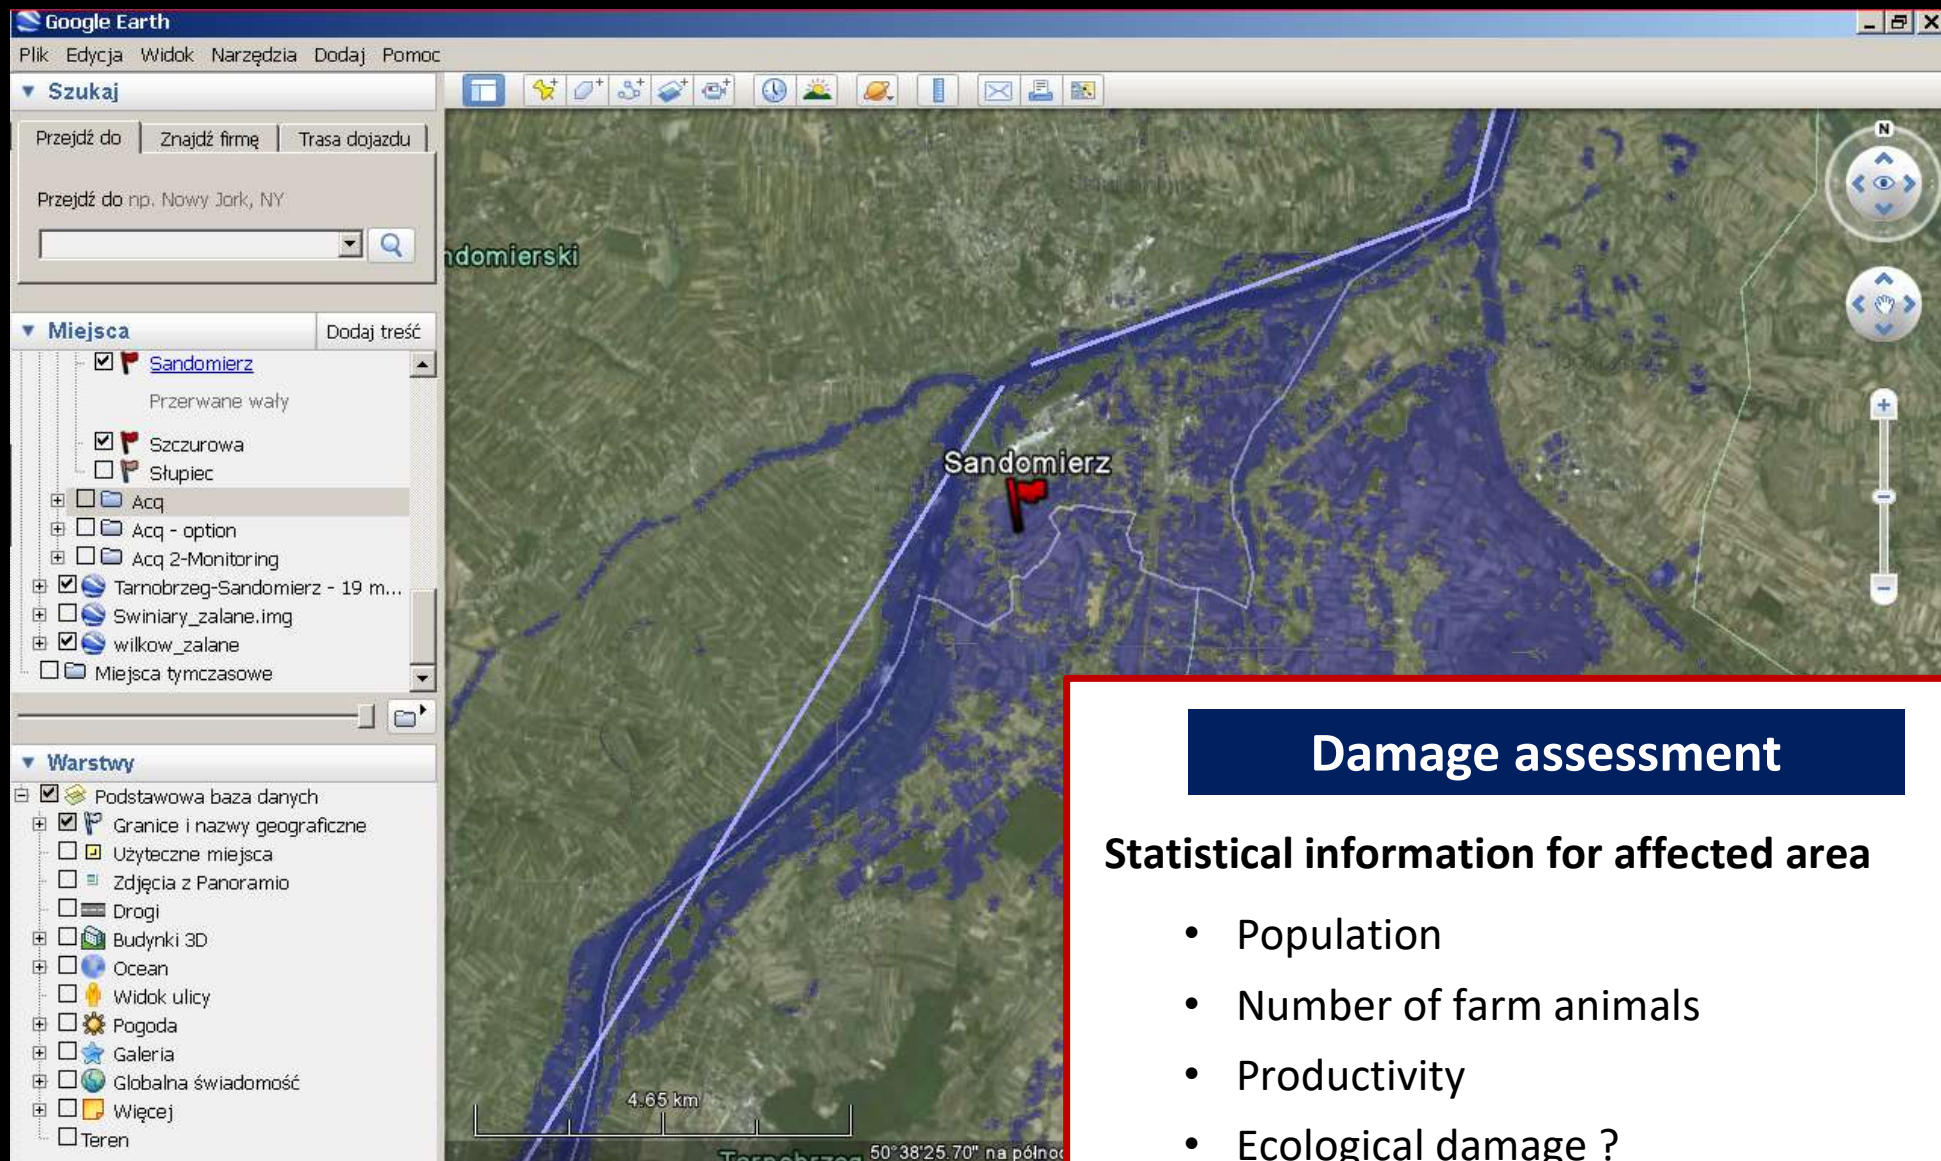

Demonstration and assessment of pre-operational solutions

Development of best practices for use of innovative solutions

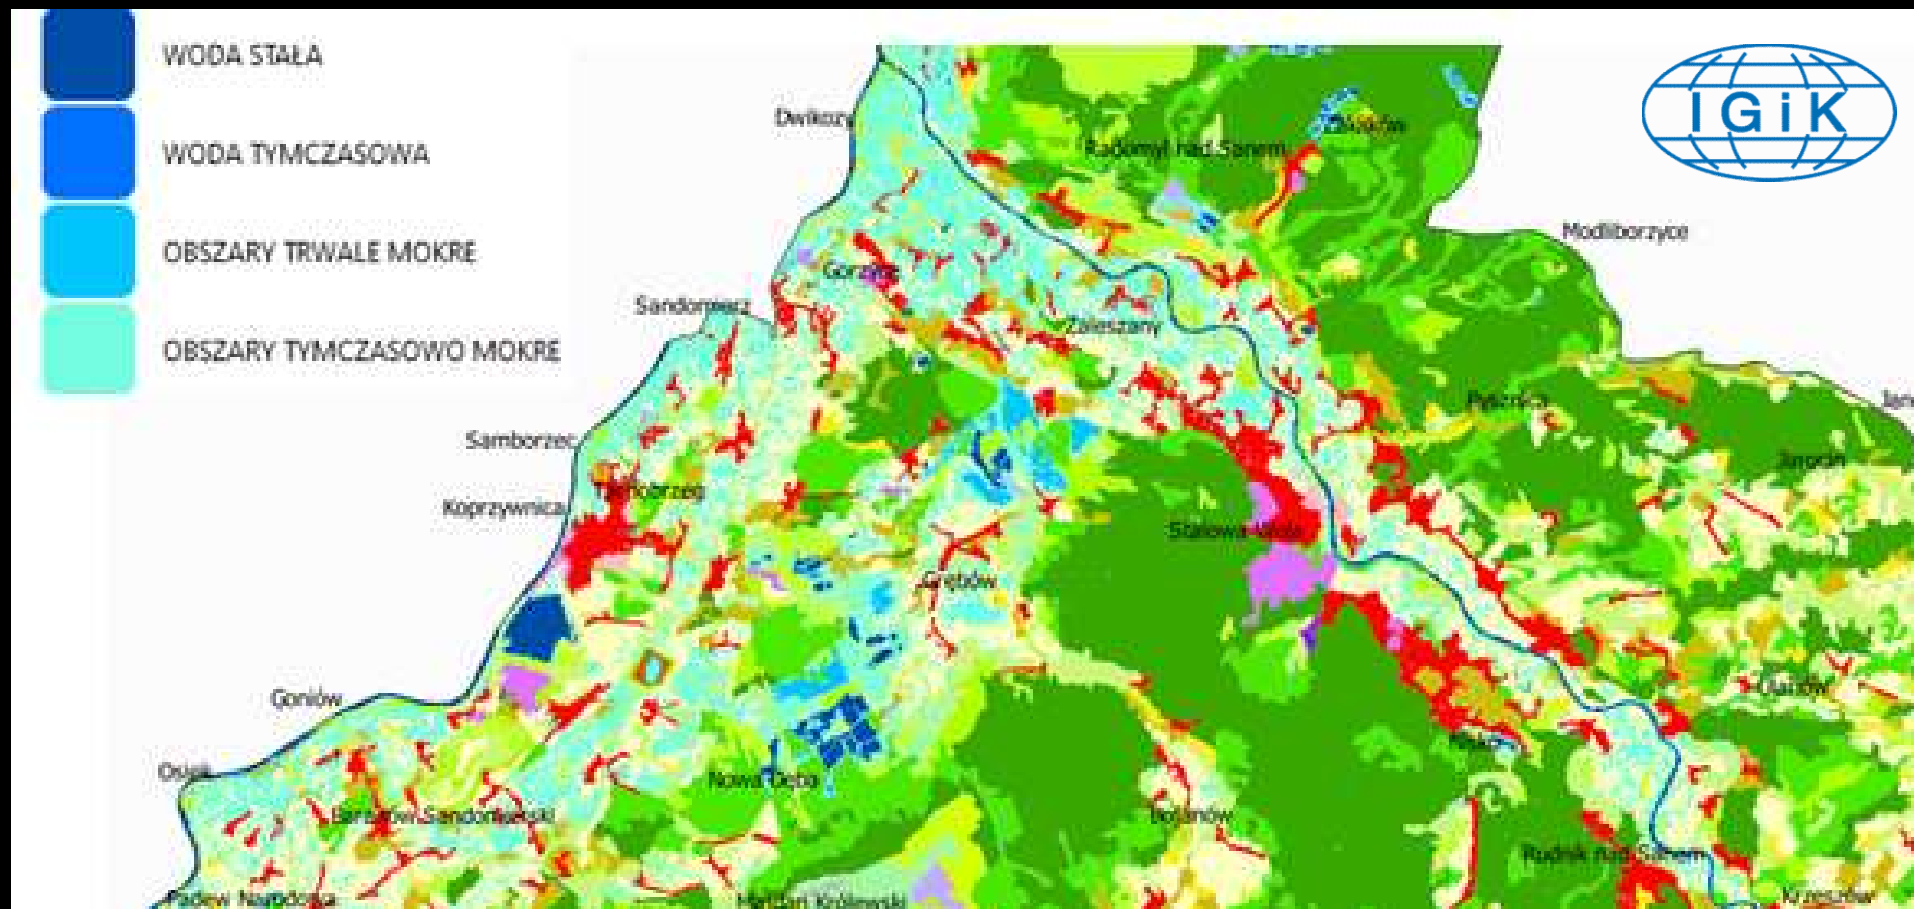

Damage assessment

Statistical information for affected area

- Population
- Number of farm animals
- Productivity
- Ecological damage ?

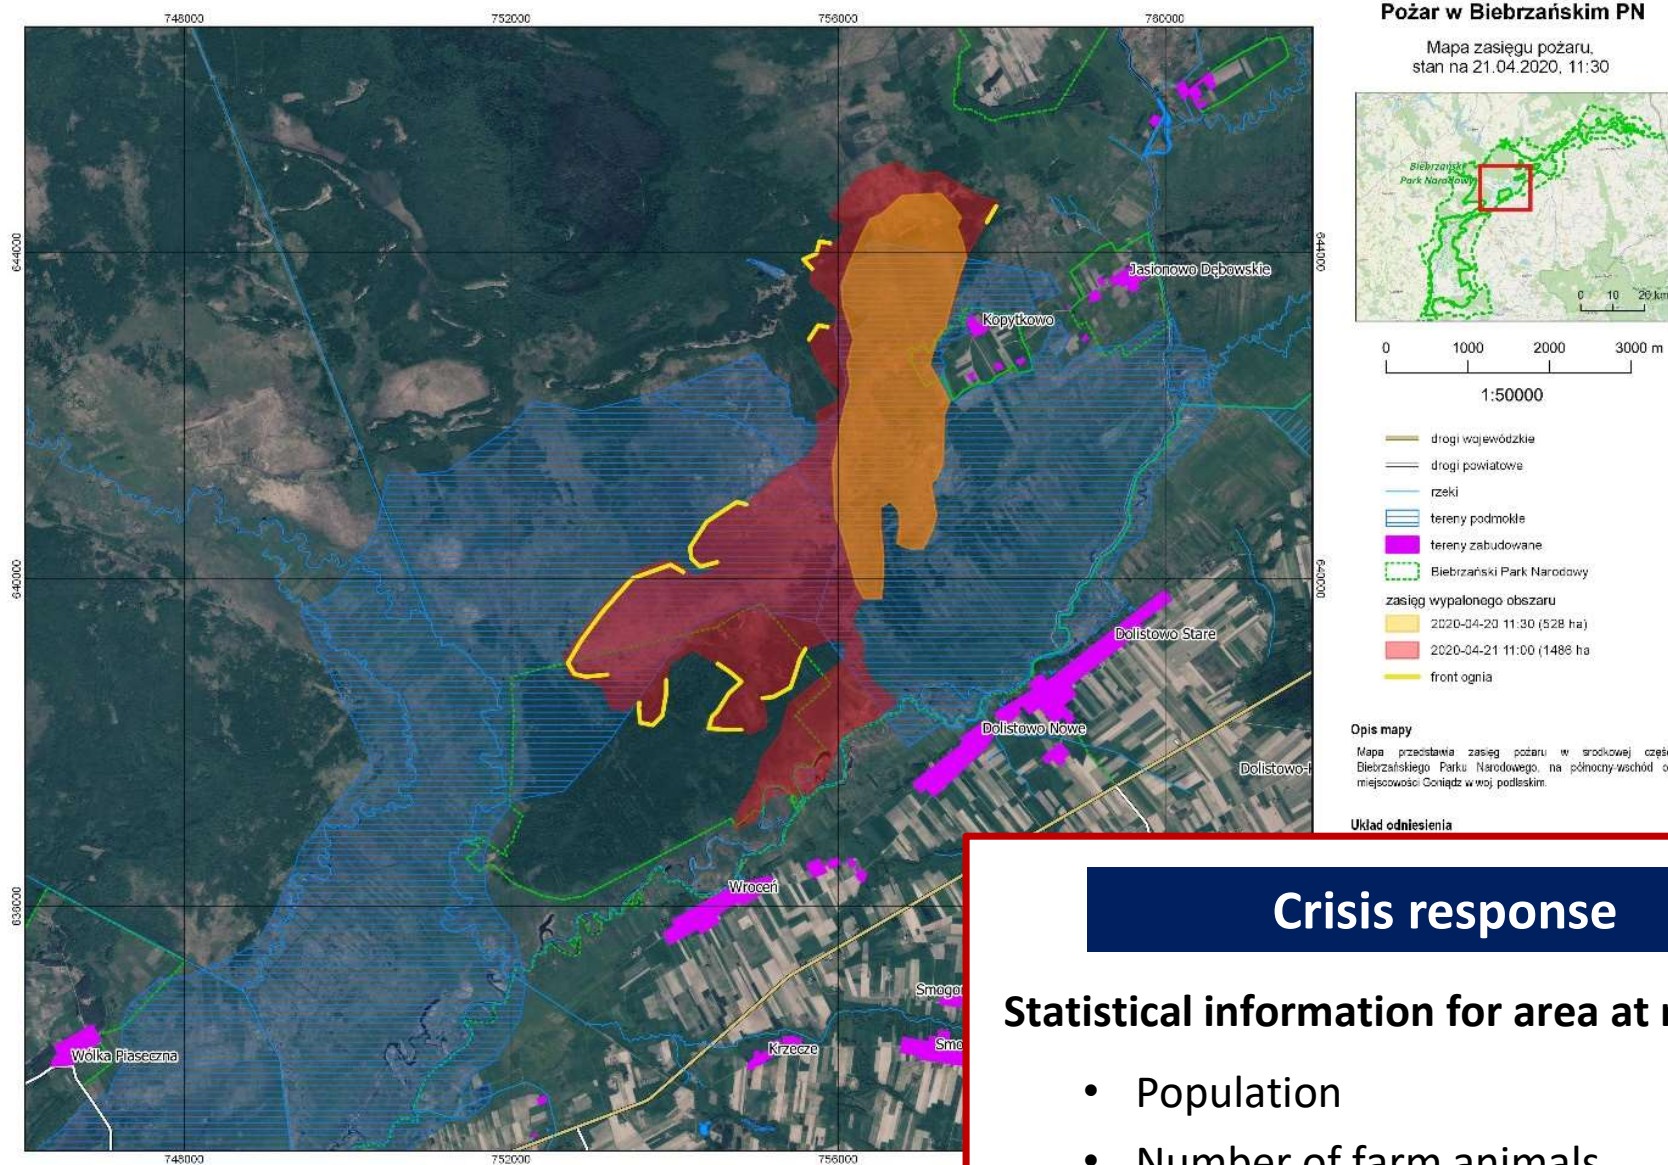

Flood extent detection with VHR imagery

**Detection of areas prone to
local flooding from underground waters**

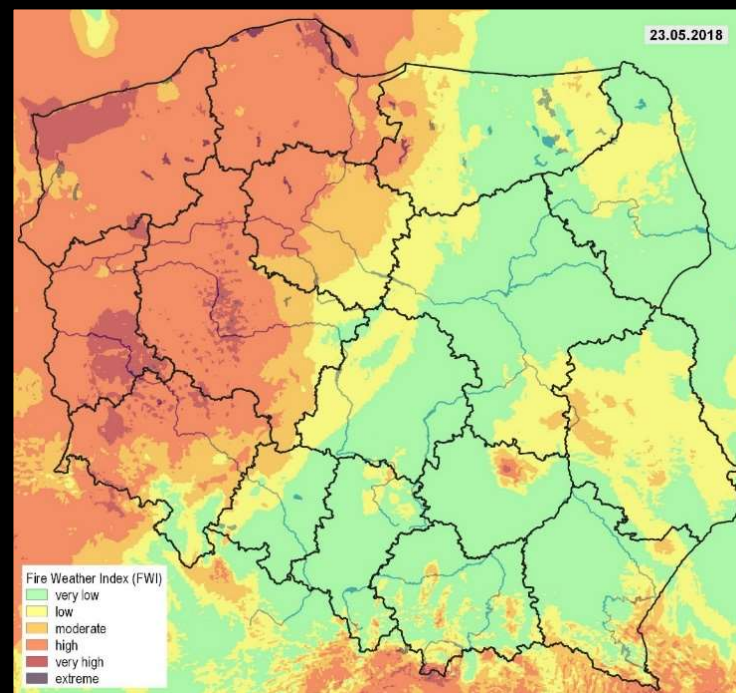

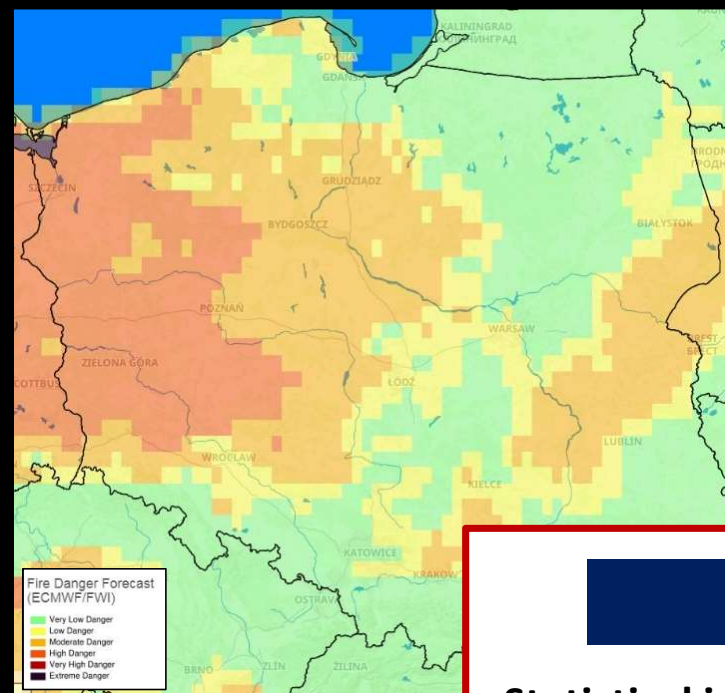

Crisis response

Statistical information for area at risk

- Population
- Number of farm animals

FWI CBK

FWI EFF

Risk assessment

Statistical information for area of interest

- Population
- Number of farm animals
- Productivity
- Ecological damage ?

Monitoring of fire w

Two different modes of using statistical data

- **Use of maps with statistical data** for crisis response and rapid damage assessment
- **Geospatial analysis based on statistical data** for more detailed damage assessment and risk assessment / risk management
